

Analyzing E-Learning Platform Purchases using MySQL

Key Insights from the Analysis

1. Top Revenue Contributors

- o Courses with higher unit prices and bulk purchases (like IT, AI, and Web Development) generate the most revenue.
- o Categories such as **IT and Web Development** show strong earning potential.

2. High Demand Courses

- o Some courses have higher total quantity sold → indicating strong learner interest.

Marketing and beginner-level courses tend to attract more learners due to accessibility.

3. Learner Spending Behavior

- o A few learners contribute significantly higher total spending (high-value customers).

Majority of learners purchase only one category → limited cross-category engagement.

4. Category Performance

- o Some categories generate high revenue but may have fewer learners (premium pricing).
- o Others have many learners but lower revenue (low-cost courses).

5. Unpurchased Courses

- o Certain courses have **zero purchases**, indicating:
 - Low visibility OR
 - Low demand OR
 - Pricing/content mismatch

Analysis

1. Descriptive Analysis (What happened?)

- o Total revenue by category

- o Total spending per learner
- o Purchase details (course, quantity, date)

2. Diagnostic Analysis (Why did it happen?)

- o Identifying high-performing vs low-performing categories
- o Understanding why some courses are not purchased o
- Comparing pricing vs demand

3. Predictive Analysis (What could happen?)

- o High-demand categories likely to continue performing well o

Learners buying one category may expand with targeted offers 4.

Prescriptive Analysis (What should be done?)

- o Suggest actions like promotions, pricing changes, and bundling
